Small Business Pulse Survey: Regions Footprint

The U.S. Census Bureau has released the latest weekly installment of its *Small Business Pulse Survey*, the counterpart to the recently introduced *Household Pulse Survey*. The *Small Business Pulse Survey* is designed to measure changes in conditions amongst small businesses during the COVID-19 pandemic. Survey results are available on the national and state levels, as well as for the nation's 50 largest (based on population) metro areas, a group which includes 19 metro areas within the Regions footprint. Our weekly summaries include the U.S. averages and individual snapshots of each of the 15 in-footprint states and the 19 in-footprint metro areas for which data are available. The latest survey period covered June 14 through June 20.

During the most recent survey period, conditions for small businesses were little changed, neither deteriorating nor improving. The run of modest but steady increases in the share of small businesses reporting increased sales/revenue came to an end in the most recent survey period, while the shares of small businesses reporting increased numbers of paid employees and increased total hours worked fell modestly. This comes during a period in which, for the U.S. as a whole, the number of positive tests for the COVID-19 virus rose materially, an increase not totally accounted for by the increase in the number of total tests administered. If it persists, the increasing number of positive tests raises two possibilities, neither of them good. One is that the upturn in the number of positive tests reverses what had been improving consumer sentiment over recent weeks, and the other is that state and/or local governments reimpose restrictions on economic and social activity, quickly reversing the recent steps to ease prior restrictions. As it was, the path forward was tenuous for many small businesses; another downturn in consumer sentiment that sees consumers become more hesitant to go to stores or restaurants or engage in other forms of economic activity (personal services, for instance) and/or another round of restrictions on activity could be impossible for many small businesses to overcome. As such, the next few weeks of data from the *Small Business Pulse Survey*, and its counterpart, the *Household Pulse Survey*, will bear watching.

In the pages that follow, we present summaries of what we consider the most relevant questions from the *Small Business Pulse Survey* for the individual states and largest metro areas within the Regions footprint, and will continue to provide these weekly summaries for the duration of the survey, as we also do with the *Household Pulse Survey*.
